EXPERIENCE

CO-FOUNDER, PRODUCT & BUSINESS

DAIdalus | October 2025 - Present

- Co-founded an AI-assisted video editing venture with a working MVP that converts natural-language intent into structured, reviewable edits on an editable timeline; users can approve, modify, reject or revert changes.
- Led product direction, positioning, demonstrations and user feedback; contributed to workflow and pipeline planning plus AI-assisted API implementation with a co-founder.
- Helped secure SGD 6,000 in SUTD Baby Shark funding and the 2026 Best Shark Award; publicly demonstrated a workflow producing an initial edit from about 20 clips / 5 minutes of footage in 10-15 minutes.

SECTION COMMANDER (3RD SERGEANT)

SAF Media | October 2023 - August 2025

- Led a 10+ person Army media team delivering 6+ public-facing and sensitive internal productions for senior SAF stakeholders under tight deadlines.
- Directed, filmed, interviewed and edited major corporate and recognition videos including ABAC, NSFOTY 2024/2025 and Army HR Recognition Day, overseeing end-to-end production quality and delegation.
- Introduced and trained team members in AI-assisted audio enhancement, subject extraction, subtitling and generated graphics using tools including Adobe Podcast and Runway.

ARCHITECTURAL TRAINEE

DP Architects | January 2023 - March 2023

- Supported client-facing proposals and tenders through ideation, graphic rendering, model-making and presentation deck development for projects including Parry Avenue Assisted Living and ABBA Arena.

EDUCATION

SINGAPORE UNIVERSITY OF TECHNOLOGY AND DESIGN (SUTD)

B.Eng. (ESD) | August 2025 - Expected 2029

- Coursework has covered mathematical modelling, probability, statistics, uncertainty and systems analysis
- Built two Streamlit applications using beginner-level Python, recursion, sorting algorithms and stack-based data structures
- Developed and demonstrated a functional AI wearable navigation prototype; independently designed its CAD enclosure and contributed to the API and AI pipeline through AI-assisted implementation

PERSONAL PROFILE

I'm an SUTD systems-design undergraduate who enjoys bringing ideas to life through video, design and AI. My interest in creative AI grew from leading media projects in the SAF and experiencing firsthand how demanding production workflows can be. That curiosity led me to co-found DAIdalus and explore how AI can make editing more intuitive without taking creative control away from the user. I enjoy learning new tools, experimenting with emerging workflows and turning rough ideas into thoughtful, polished work that people can actually use.

SKILLS & EXPERTISE

Video production: Adobe Premiere Pro, After Effects, videography, video editing, motion graphics, colour grading, sound design, storyboarding, captions, pacing and visual storytelling

Generative AI: Runway, Kling, Sora, Seedance, Higgsfield, ChatGPT image generation, prompt engineering, AI video/image generation and AI-assisted editing workflows

Product & technical: API integration, AI-assisted prototyping, computer-vision workflows, Python (beginner), Streamlit, Rhino 7 and Grasshopper

Languages: English (fluent), Mandarin (conversational), Cantonese (conversational)

PROJECTS

DAIdalus: AI-Assisted Video Editing Platform

- Working MVP that translates natural-language editing instructions into a structured, reviewable edit plan instead of generating a locked final video
- Analyses footage and script context to propose edits within an editable video timeline
- Allows users to inspect, approve, modify, reject or revert each proposed change before execution
- Designed to reduce the technical friction of editing while preserving control over pacing, structure and storytelling

Walkie-Talkie: AI Wearable Navigation Assistant

- Developed a functional wearable prototype that uses GPS routing, Street View imagery and AI visual comparison to provide landmark-based audible directions
- Independently designed the CAD enclosure and contributed to the backend architecture, API integration and AI pipeline through AI-assisted implementation
